

# Neopentyl Glycol flakes

## Product Description

Neopentyl Glycol (NEO) is a polyhydric alcohol containing two primary hydroxyl groups. It is a white crystalline material in flakes. NEO is well known for its advantages providing high UV, hydrolytic and chemical resistance. This in combination with excellent balance between hardness and flexibility as well as superior performance in terms of control and reactivity during esterification and curing makes it ideal in several different applications.

## Segment Applications

Polyester resins for powder coating, coil coating and can coating  
Unsaturated polyesters for gel-coats and reinforced plastics  
Alkyd resins, solvent and waterborne  
Polyurethanes for coating, foams and elastomers  
Lubricant esters

## Delivery Forms

## Handling and Storage

Neo is hygroscopic and should be handled to prevent moisture absorption. For this reason, it is important to store Neo flakes in the original package. Store Neo flakes at low temperature, preferably below 30°C, to avoid cake formation. Stacking pallets during storage could increase the risk of caking.
