

ProPhorce™

Waterproof protection

ProPhorce™ drinking water solutions

- Reduce the risk of bacterial infection
- Effective at eliminating bacterial growth in the water supply
- Efficiency throughout the intestinal tract

The power of water

Taking care of water supply is vital

Water is an essential element in nutrition, but it can also be a large source of infection and disease. Taking care of the water supply is vital for having healthy and well performing livestock.

Would you drink your animal's drinking water?

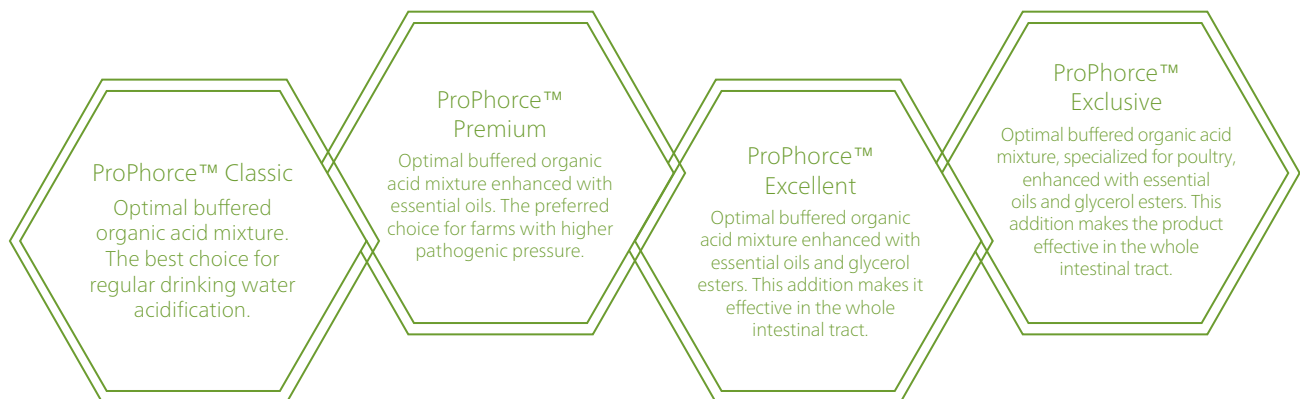

The quality of drinking water for livestock is often questionable. Research in the Netherlands has shown that the bacterial load (CFU) at animal level is above the allowed limit.* In practice around 80% of the farms have water that is unsuitable for consumption.**

Using organic acids in the drinking water is an easy and well-known method to reduce the bacterial pressure in the drinking water and therefore assist in the animal's wellbeing.

Specific needs, specific products

Perstorp has a range of products designed for your needs. Like an umbrella protecting you from the rain, these products can protect your animals from unclean water. Going from a standard product such as ProPhorce™ Classic to a highly specialized products for swine or poultry such as the ProPhorce™ Excellent or ProPhorce™ Exclusive.

The basis of ProPhorce™ drinking water solutions is formed by a highly concentrated and safely buffered mixture of organic acids. Additions of essential oils and glycerol esters make for even more powerful products that live up to your expectations.

Product	Species	Water quality	Antibacterial	Gut health
ProPhorce™ Classic	 	 		
ProPhorce™ Premium	 	 	 	 
ProPhorce™ Excellent			 	  
ProPhorce™ Exclusive			 	 

Application guidelines

The ProPhorce™ range offers a simple solution to protect the well-being and performance of livestock in a cost-effective way. Dosing is the same for all products: 1 l per 1000 l drinking water due to the highly concentrated acid mixture. When bacterial pressure is high, a more specialized product in the range will help boost the animal's protection. We advise to regularly check pH at animal level to ensure sufficient acidification.

Three easy steps

1. Clean the drinking water system before using the products
2. Dose in 1l per 1000 l drinking water
3. Check pH at the drinking water nipples:

Swine: pH 3.5–4.0

Poultry: pH 3.8–4.0

Devoted to your success

Specialist

Perstorp Animal Nutrition is a global specialist in acid-based solutions with more than 50 years of experience. We know the importance of gut health and feed preservation for the livestock industry. Therefore, we have focused our skills, knowledge and resources on finding new ways to improve gut health and preservation. Thanks to this dedication, we are the first in developing next generation solutions that exceed your expectations.

Swedish multinational

As Perstorp Animal Nutrition, we belong to the Swedish multinational Perstorp Group – a basic producer of organic acids such as propionic acid, formic acid and butyric acid. As a part of the Perstorp Group, we can take advantage of an extensive amount of knowledge accumulated since 1881, joint R&D facilities and our own production facilities in Europe, North America and Asia. As Animal Nutrition we operate independently, flexibly and close to our markets.

Agricultural lifeline

Our highly knowledgeable and motivated team has an agricultural lifeline. Being in close contact with farmers and the feed industry drives our dedication in adding value to your business. We challenge ourselves constantly to enhance gut health and preservation for better performance, feed efficiency and daily weight gain: for your business.

Perstorp Animal Nutrition:

Dedicated specialist in gut health and preservation. Devoted to success
