

# DMPA® Fine

## The key dispersing monomer for PUDs

### Product Description

DMPA®, with the chemical name Dimethylolpropionic Acid, is a trifunctional compound of neopentyl structure containing two primary hydroxyl groups and one tertiary carboxyl group. In polyurethane dispersions, the benefit of DMPA® is that only small amounts are needed to create stable dispersions, resulting in excellent water resistance. DMPA® is a white crystalline material.

DMPA® Fine is the DMPA product with the smallest particle size for the highest rate of dissolution.

### Segment Applications

Polyurethane dispersions as well as other water based systems (e.g. alkyds, epoxy and polyesters). Also used in solventborne alkyds and in various other resin technologies.

### Delivery Forms

25 kg bags (35 bags per pallet); Easyopen bags in EU only

Waterborne solvent free PUDs need to deliver not just low/no VOC solutions for coatings and adhesives but stable and precise performance properties within cost requirements. Our PUD building block products, such as DMPA®, give resin producers the flexibility to choose the exact properties required

# DMPA® Fine

The key dispersing monomer for PUDs

## Sales Specification

Characteristics	Unit	Specification
Hydroxyl content	wt %	Min. 24.0
Neutralization Equivalent	g/Eq	Max. 141.0
Ash as Na <sub>2</sub> O	wt %	Max. 0.03
Water content	wt %	Max. 0.3
Phthalic Color	APHA	Max. 250
Particle Size > 45 Mesh ( 354 µm)	%	Max. 1

## General Characteristics

Characteristics	Unit	Typical Value <sup>1</sup>
Molecular Weight	g/mol	134.1
Acid Number	mg KOH/g	410 – 415
Bulk Density	kg/m <sup>3</sup>	839
Appearance		Solid granules

1. Typical values are for information only and not part of sales specification

## Handling and Storage

Perstorp recommends storing DMPA® in sealed bags at ambient temperature, in a dry area protected from direct sunlight and the elements.

CAS No.: 4767-03-7  
 EC (EINECS) no.: 225-306-3  
 HS No.: 2918 19
